

What has changed and how does the Safe Active Street operate?

When entering a Safe Active Street, you will notice blue-and-white road patches, with 30km/h speed limit signs narrower carriage ways, and raised platforms that help to slow traffic and alert people that they are in a walking and bike riding friendly space.

Along the route, bike symbols and red asphalt (in some cases) are typically used to mark out the route and suggest where bikes should ride.

Safe active streets are a shared 'street' space for everyone (bikes, walkers and vehicles) linking local attractions, transport hubs, shopping centres, and shared paths.

Newly installed 30kmh speed signs help to slow traffic and reduce the potential for collisions. The narrower road width helps to maintain the 30kmh speed along the whole route.

Raised platforms/ramps aim to slow vehicles down and alerts drivers they are entering a Safe Active Street.

New tree plantings, landscaping, seating, and lighting, help to make your journey more comfortable.

Changed priority at some intersections (re-positioned stop and give way signs) allows for a continuous route.

Bike riders (two) have space to ride side by side, when two cars meet in opposing directions, one driver needs to pull in behind the bike until the other car passes.

Improved crossings and slower traffic speeds help families to stay healthy and spend quality time together.

Follow the red path for a safe journey to and from
Westfield Booragoon and the Riseley Street Activity Centre.

Project background

The City of Melville with help from the Department of Transport, has installed a Safe Active Street linking Westfield Booragoon Shopping Centre and Riseley Street Activity Centre, along Links Road, Collier Street, Millington Street, Hope Road, and onto Willcock Street.

The Safe Active Street aims to make the street safer for everyone and is a convenient, easy and enjoyable way to get around.

It is designed to create a comfortable environment for road users including walkers and people who ride with all levels of experience.

Safe Active Streets allow mums, dads, children, older people and others to make short trips on bikes to schools, parks, shops or visit neighbours.

The Links Road Safe Active Street has additional tree plantings to provide a shady and cooler street for all.

New seating provides places to stop and rest and enjoy the surroundings.

Aside from the improved visual appeal of the street, more local people will be using the street increasing the natural surveillance in the area and improving community connections.

For more information about the Links Road Safe Active Street, visit www.melvillecity.com.au/SAS
